AttentionIT attracting international interest: awarded UK contract

AttentionIT, Inc., the nation's premier environmental software company that provides a unique 'cradle to grave' solution to insure the safe, accurate and compliant tracking and management of hazardous, radioactive and mixed waste has been awarded a contract to introduce its software at five of the United Kingdom's nuclear sites that are currently being decommissioned in southern England.

Magnox South Ltd, a company owned by Utah-based EnergySolutions, has announced its contract award to AttentionIT, Inc. of Knoxville, Tenn., to install its eMWaste[®] software at all its facilities and to proceed with an aggressive roll-out schedule that AttentionIT will service from its international headquarters in Warrington, England. The award is seen as a significant opportunity for the company to consolidate its presence in Europe and to contribute to the safe, efficient and cost-effective constraints imposed by the UK government that oversees the decommissioning of its public sector nuclear sites, both nuclear reactors and research sites, throughout the country.

The UK has authorized more than \$140 billion over several decades for the clean-up of 19 civil nuclear sites, including what is considered to be the world's largest and most complex nuclear site at Sellafield in Cumbria, a remote part of northern England. The country's ambitious decommissioning program is attracting international interest as many of the country's first commercial nuclear power stations and research establishments have reached the end of their life cycle and need to be safely and securely decommissioned. AttentionIT's success in securing a contract in this market reflects the high level of skills, knowledge and expertise prevalent in the more mature US nuclear decommissioning market and they will join lofty American presence in the UK where, in the last 2 years, major contracts have been awarded to much larger US-based companies.

AttentionIT, whose clients include national laboratories and Department of Energy plants in the US, provides a proven *off the shelf* tool that delivers a secure tracking solution accurately and compliantly through its eMWaste[®] software. Says Mark Orren, President and CEO, "We are very excited and proud to be expanding into the UK where we see enormous potential to service the needs of the market while benefitting the environment in a socio-economic capacity by increasing overall efficiencies and ensuring that safety requirements are met. In terms of further expansion, our UK office is strategically located in an area that possesses the necessary infrastructure to support our growth into the European market and beyond." The office, located midway between Liverpool and Manchester, lies at the heart of a major nuclear industry cluster that extends northwards to the Sellafield site where approximately 60% of the UK's total decommissioning budget is directed.
